Kymanox Launches CMOLocator.com FOR IMMEDIATE RELEASE

Kymanox, LLC is pleased to announce CMOLocator.com is now live. CMOLocator.com is a free search engine to find biopharmaceutical Contract Manufacturing Organizations (CMOs). The database, which is growing daily, currently has over 125 production lines with capability, capacity and availability information. Searches are conducted by selecting any number of criteria such as Drug Substance, Drug Product, Mammalian Cell Culture, and/or Microbial Fermentation. The user can also select the size of the required reactor and the clinical stage of the product. A number of other technical service offerings, such as Cell Line Development or Formulation Development, can be selected to further narrow searches. Organizations looking to outsource their manufacturing can spend a lot less time and money searching for possible CMOs.

According to Stephen Perry, President of Kymanox, *"CMOLocator is a paradigm shift in providing and organizing the information related to biopharma CMOs. CMOs can take control of and maintain their own data to ensure its accuracy, and users can get search results easily and immediately without having to register or provide any personal information. Best of all, it's free for both the CMOs and the users of the search engine."*

CMOs can also elect to be a site sponsor and receive additional benefits from CMOLocator. Any product or service providers may also purchase advertising space on the site. Please see the full-page feature on CMOLocator in the December 2009 issue of Biopharm International's Corporate Capabilities issue. CMOLocator will also be exhibiting at the BIO 2010 Conference in Chicago, Illinois, 03-06 May 2009.

KYMANOX COMPANY DESCRIPTION

Kymanox (ki'-mah-noks') means *Ideal Knowledge Transfer™* and serves the Biotechnology, Pharmaceutical, and Medical Device industries.
